| XIII | 60,0 x 12,0 |
| XIV | fino a 100 |

Marina d'Arechi is one of the most modern marinas for pleasure boating in the Mediterranean. Its hold, mooring comfort, compliance with the highest protection and safety requirements, have been certified, also with special tests in the tank, by the HR Wallingford institute, recognized world leader in the field of marine hydraulic engineering. From a strong environmental integration, the breakwater represents one of the innovative elements that makes the Marina unique. Entirely made of natural stone, with inclined surfaces on the outside and inside, in an anti-reflective function, to cancel out any effect of wave motion and undertow, it is 1200 meters long. 60 meters wide on the seabed, 25 at sea level, it is 6 meters high, with a depth at the mouth of about 8 meters. The dam completely embraces the entrance to the port, creating a sheltered basin protected from the winds of every traverse. The Marina d'Arechi is a safe haven for every type of boat, of any size, in all sea and wind conditions, in every season of the year. The total water surface is 340,000 square meters, with 1,000 berths ranging from 10 to 100 meters in length, with depth ranging from 3.5 to 7 meters
